## CONTENTS

| List of Figures Preface |  | xii  |
|-------------------------|--|------|
|                         |  | X    |
| Ack                     | nowledgments                                 | xxvi |
| 1                       | The Twilight of Fuel and the Ascent of Power | 1    |
|                         | The Bottomless Well                          | 2    |
|                         | The Energized Environment                    |      |
|                         | Pyramids of Quads                            | 3    |
|                         | Pontiacs, Power Plants, and Pentiums         | 9    |
|                         | Capital Spending                             | 14   |
|                         | The Real Cost of Power                       | 16   |
|                         | The Twilight of Fuel                         | 18   |
|                         | The First Law                                | 21   |
| 2                       | Voracious Technologies                       | 24   |
|                         | The "Fire-Engine"                            | 2.5  |
|                         | Jumbos and Jets                              | 27   |
|                         | Electrification                              | 31   |
|                         | The Power of Logic                           | 33   |
|                         | The Logic of Power                           | 40   |
| 3                       | The Virtue of Waste                          | 44   |
|                         | Pyramids of Virtuous Waste                   | 48   |
|                         | Order  | 52   |
|                         | The Second Law                               | 54   |
| 4                       | Saving the Perilously Efficient Grid         | 58   |
|                         | The Perilous Grid                            | 59   |
|                         | Assault on the Wires                         | 62   |
|                         | California's Slouch into Night               | 6.5  |
|                         | Restoring Order                              | 67   |
|                         | More Plants and Shorter Wires                | 7:   |
| 5                       | Fueling the Silicon Car                      | 75   |
|                         | Weight, Power, and Inertia                   | 76   |
|                         | The Silicon Power Train                      | 79   |
|                         | Convergence                                  | 83   |
|                         | Power Plants on Wheels                       | 85   |
|                         | Uranium in the Gas Tank                      | 87   |
|                         | Blind Visionaries                            | 89   |
| 6                       | Bulbs, Radios, and Negawatts                 | 91   |
|                         | Edison and DeForest                          | 93   |
|                         | Bulbs on a Chip                              | 97   |
|                         | Lighting the Whole Rainbow                   | 100  |
|                         | Convergence                                  | 102  |
|                         | Efficiency                                   | 105  |

| 7     | The Paradox of Efficiency               | 108 |  |
|-------|---|-----|--|
|       | The Efficient Future                    | 109 |  |
|       | The Efficient Past                      | 111 |  |
|       | Fast                                    | 112 |  |
|       | Light                                   | 116 |  |
|       | Faster and Lighter                      | 118 |  |
|       | Inefficient by Design                   | 121 |  |
|       | Efficient Waste                         | 123 |  |
| 8     | Power, Productivity, Jobs, and GDP      | 124 |  |
|       | Power and Productivity                  | 126 |  |
|       | Dexterous Robots                        | 129 |  |
|       | Digital Factories                       | 131 |  |
|       | Power and Jobs                          | 134 |  |
| 9     | Insatiable Demand                       | 138 |  |
|       | Saving Time                             | 138 |  |
|       | Creating Order                          | 142 |  |
|       | Suppressing Chaos                       | 144 |  |
|       | Waging War                              | 147 |  |
|       | Powering Logic                          | 150 |  |
|       | Enriching Life                          | 153 |  |
| 10    | Saving the Planet with Coal and Uranium | 156 |  |
|       | Carbon Chaos                            | 157 |  |
|       | America the Beautiful Carbon Sink       | 160 |  |
|       | Carbohydrates versus Hydrocarbons       | 164 |  |
|       | The Solar Road to Environmental Ruin    | 166 |  |
|       | Green Nukes                             | 167 |  |
| 11    | Infinite Supply                         | 172 |  |
|       | Rising Reserves                         | 174 |  |
|       | Power in Pursuit of Energy              | 177 |  |
|       | Logic in Pursuit of Power               | 178 |  |
|       | Maxwell's Demon                         | 182 |  |
|       | Room at the Bottom                      | 184 |  |
|       | Perpetual Motion                        | 186 |  |
| 12    | The Power of Life                       | 189 |  |
|       | Sugar and the Helix                     | 190 |  |
|       | In the Heat of the Night                | 194 |  |
| Notes |   |     |  |
